About Us — HFV Protocol

Company Overview

HFV Protocol Technologies Limited is a legally registered entity in **England, United Kingdom**, founded in **April 2022**.

- **Company No.:** 14067018

- **Legal Jurisdiction:** United Kingdom corporate law

- **Core Focus:** Development of HFV Protocol — a blockchain ecosystem for staking, governance, airdrops, treasury management, and decentralized integrations.

HFV operates under the principle of **transparent tokenomics** and **community-first governance**. All smart contracts are designed to be **on-chain, auditable, and verifiable by the community**.

Mission

HFV's mission is to: - Build a **transparent, community-governed protocol**.

- Provide **sustainable staking rewards** without inflationary risks.

- Establish **DAO-driven decision-making** for treasury spending and ecosystem growth.

- Reward early contributors and stakers through **fair airdrop distribution**.

- Maintain **compliance and accountability** as a registered company.

Core Pillars

1. **DAO Governance** — On-chain proposals, quorum rules, weighted voting based on staking tiers.
 2. **Airdrops** — 15% of supply, distributed via Merkle proofs and vesting schedules.
 3. **Staking** — Four tiers (21 days, 3 months, 6 months, 12 months). Longer locks = stronger rewards & governance rights.
 4. **Treasury** — 18% allocation, DAO-governed, funding staking, audits, grants, and ecosystem projects.
 5. **Integrations** — Wallets, exchanges, infrastructure providers, and community platforms.
-

Achievements So Far

- Token deployed: **70,000,000 HFV supply (0 decimals)**.
- Staking contract live with **4 lock tiers**.
- **Seed Sale contract + DApp** deployed with vesting integration.
- Draft contracts for **Airdrops** (AirdropConfig + MerkleDistributorVesting).
- Draft rules for **DAO governance lifecycle**.
- **Treasury planner DApp** built for CSV exports and DAO budgeting.
- **HUD-style DApp UIs** built for staking, treasury, DAO, and airdrops.

Airdrops — HFV Protocol

□ Updated: 26 August 2025

Allocation

- **15% of supply** = 10,500,000 HFV
 - Reserved for early contributors, community members, and stakers.
-

Technical Implementation

- **AirdropConfig.sol** — Stores distribution config.
 - **MerkleDistributorVesting.sol** — Verifies claims + enforces vesting.
 - **generate-merkle.ts** — Builds Merkle root from CSV, outputs proofs JSON.
-

Rules

- All engaged community members and stakers are eligible.
 - DAO decides schedule and allocation per round.
 - Higher-tier stakers influence timing/amounts.
 - Anti-dump: governance rights lost if tokens are sold too fast.
-

Transparency

- Proof JSONs published before each distribution.
- DAO sets Merkle root on-chain.
- Claim + vesting events logged permanently.

DAO & Governance — HFV Protocol

□ Updated: 26 August 2025

Overview

HFV DAO governs all major decisions: **treasury spending, airdrop schedules, governance parameters, and integrations**. It ensures **transparent, on-chain, community-driven control**.

Proposal Lifecycle

1. **Draft** — Idea proposed by community member.
 2. **Review** — Discussion period, feedback from stakers.
 3. **Vote** — On-chain voting, weighted by staking tier.
 4. **Execute** — Smart contract enforces the result.
-

Staking Tiers & Rights

- **Tier 1 (21 days)** → Participation rights.
 - **Tier 2 (3 months)** → Proposal review rights.
 - **Tier 3 (6 months)** → Voting rights with weight boost.
 - **Tier 4 (12 months)** → Full governance rights (submit, vote, execute).
-

Anti-Dump Rule

- If a user sells >25% of their claimed HFV post-staking, they lose DAO rights.
 - Enforced by:
 - Snapshot of balances
 - DAO contract check on eligibility
-

Transparency

- All proposals/votes are on-chain.
- Quorum ensures decisions can't pass without community involvement.
- Governance history = permanent, public audit trail.

Integrations — HFV Protocol

□ Updated: 26 August 2025

Purpose

HFV grows by integrating with wallets, exchanges, infra providers, and community platforms.

Current Integrations

- **Wallets:** MetaMask, WalletConnect (Reown protocol)
 - **Exchanges:** Uniswap (ETH/HFV, USDC/HFV pairs)
 - **Infra:** Alchemy (RPC), Etherscan (verification), Dune dashboards
 - **Community:** Discord, Telegram, X (Twitter)
-

Future Integrations

- **Centralized exchange listings** (CEX)
- **Real-time telemetry dashboards** for treasury & staking
- **DAO proposal explorer** integrated into main DApp
- **Grant programs** with ecosystem projects

Roadmap — HFV Protocol

📅 Updated: 26 August 2025

Phase 1

- Token deployment (70M HFV, 0 decimals)
- Staking contracts live
- Seed Sale contract + DApp ✓

Phase 2

- AirdropConfig + Merkle Distributor ✓

Phase 3

- DAO Governor deployment
- Treasury planner integration (CSV + on-chain)

Phase 4

- Full ecosystem dashboard (staking, DAO, airdrops, treasury telemetry)

Phase 5

- Exchange integrations
- Partner ecosystem growth
- Grants program

Staking — HFV Protocol

□ Updated: 26 August 2025

Overview

HFV staking incentivizes long-term alignment.

Users lock HFV tokens in **tiered staking contracts**, receiving rewards and governance rights.

Tiers

- **Tier 1** → 21 days
 - **Tier 2** → 3 months
 - **Tier 3** → 6 months
 - **Tier 4** → 12 months
-

Rewards

- Rewards scale with **lock duration**.
 - Rewards are automatically distributed on claim.
 - Higher-tier stakers = stronger governance rights.
-

Claiming

- Tokens + rewards are claimable once lock expires.
 - DAO anti-dump rule applies (selling >25% = loss of rights).
-

Smart Contract Functions

- `stake(uint256 amount, uint256 duration)`
- `claim(uint256 index)`
- `getPendingReward(address, uint256)`
- `getStakeCount(address)`
- `getStakedAmount(address, uint256)`

Transparency & Compliance — HFV Protocol

□ Updated: 26 August 2025

Company

- **Entity:** HFV Protocol Technologies Limited
 - **Company No.:** 14067018
 - **Jurisdiction:** United Kingdom
-

Compliance

- DAO governance for transparency
 - Public treasury planner
 - Team/Devs allocation vested on-chain
-

Audits

- Smart contracts designed to be audit-ready
 - Audit reports (to be published after final review)
-

Accountability

- DAO oversight on all allocations
- CSV + on-chain proof of treasury and airdrops
- Community participation enforced by staking tiers

Treasury — HFV Protocol

□ Updated: 26 August 2025

Allocation

- **18% of supply** = 12,600,000 HFV
-

Split

- **Treasury Reserve** → funds staking rewards, ecosystem projects, audits.

- **Team/Devs** → locked via vesting (DAO decides parameters).
-

Vesting (Team/Devs)

- **TGE %**: configurable by DAO
 - **Cliff**: default 6 months
 - **Linear vesting**: 24 months
-

Treasury Planner

- DAO submits project funding proposals.
 - Recorded in planner table (project, category, amount, months, status).
 - Exportable to CSV for DAO review + transparency.
-

Governance

- DAO controls both Treasury Reserve and Team/Devs allocation.
- Only vested/unlocked tokens can be moved.
- All treasury actions require DAO approval.
